

New Product Release

JL Schwieters Introduces the

JL Schwieters, developer of innovative framing systems since 1980, has added two new components to it's NexSTEP System - the NexSTEP Stair System and the NexSTEP Fireplace/Entertainment Enclosure.

NexSTEP Stair Systems are delivered assembled and ready to install, eliminating the difficult and time-consuming work involved in cutting and assembling stairs at the job-site.

These new components can be easily incorporated into your framing package with a single phone call. Precision cut and carefully assembled from engineered wood, these components offer greater strength than products made from natural wood, assuring squeak-free, completely rigid stairways, and fireplace/entertainment enclosures, which consistently meet your exact specifications.

NexSTEP Fireplace/Entertainment Center Enclosures are delivered fully assembled, ready to set in place and finish.

These NexSTEP components will reduce your crews' on-site construction time by as much as 70%, while eliminating such common costly problems as over-cutting, splitting, shrinking, warping and the re-work caused by inferior materials. Our guarantee stands behind every component in the NexSTEP System. See them for yourself online at www.jlschwieters.com. Or call Brooke Rhein, Director of New Product Release, at 651-762-1816.
